

SOP-GHS-2100: Chemical Labeling and Safety Data Sheet Management

Document owner: Environmental Health and Safety Department **Effective date:** 2024-02-20 **Review cycle:** 36 months

Section 1. Purpose and Scope

Governs GHS (Globally Harmonized System) labeling of chemical containers and management of the site Safety Data Sheet (SDS) library.

Section 2. Primary Container Labeling

Clause 2.1 — Manufacturer-supplied containers shall retain their original GHS label (product identifier, signal word, hazard pictograms, hazard/precautionary statements) for the container's entire life; a damaged or removed label shall be replaced with an identical reprint before further use, not a generic substitute.

Section 3. Workplace/Secondary Labeling

Clause 3.1 — A secondary container filled from bulk for immediate use by the person filling it, within the same shift, requires only the product identifier.

Clause 3.2 — A secondary container that will be used beyond the immediate shift, or by someone other than the person who filled it, requires full workplace labeling: product identifier, hazard information sufficient to convey the primary hazards, and the responsible department.

Section 4. SDS Library

Clause 4.1 — A current SDS for every chemical in facility inventory shall be accessible at the point of use within the same shift it could be needed — electronic access counts if the system is available during a power outage or network failure, otherwise a physical binder is required at that location.

Clause 4.2 — A new chemical shall not be introduced to a work area until its SDS is added to the library and reviewed for any required engineering control, PPE, or storage segregation change.

Section 5. Records

Clause 5.1 — SDS library contents are reviewed against actual chemical inventory annually; superseded SDS versions are retained for 30 years per exposure recordkeeping requirements.
