

SOP-MOC-2400: Management of Change

Document owner: Process Safety Department **Effective date:** 2024-05-15 **Review cycle:** 24 months

Section 1. Purpose and Scope

Governs the review and authorization process for any change to process technology, equipment, procedures, or organization that could affect safety, environmental, or process integrity.

Section 2. Trigger for MOC

Clause 2.1 — A Management of Change (MOC) review is required for any permanent or temporary change outside established operating limits or equipment specifications, including substitution of equipment with a different specification, even if apparently equivalent.

Clause 2.2 — Replacement-in-kind (identical specification, same manufacturer or an approved equivalent already on the approved vendor list) does not require MOC; any deviation from replacement-in-kind does.

Section 3. Review Requirements

Clause 3.1 — Every MOC requires review of: process safety information affected, operating procedure updates needed, training needs, and pre-startup safety review requirements before the change is implemented.

Clause 3.3 — A change affecting a safety-critical device (relief valve setting, interlock setpoint, alarm setpoint) requires process safety engineering sign-off, not just the requesting department's approval.

Section 4. Temporary Changes

Clause 4.1 — A temporary change (e.g., a jumper around an interlock for troubleshooting) requires the same MOC review as a permanent change, plus an explicit expiration date; a temporary change not reverted or converted to a permanent MOC by its expiration date is treated as an unauthorized change.

Section 5. Pre-Startup Safety Review

Clause 5.1 — Before startup following any MOC affecting a covered process, a pre-startup safety review confirms construction/installation matches the design, procedures are updated, and training is complete.

Section 6. Records

Clause 6.1 — MOC forms and pre-startup safety review checklists are filed to the Process Safety File and retained for the life of the affected equipment/process.
